

Smarter Balanced Assessment Consortium

Digital Library

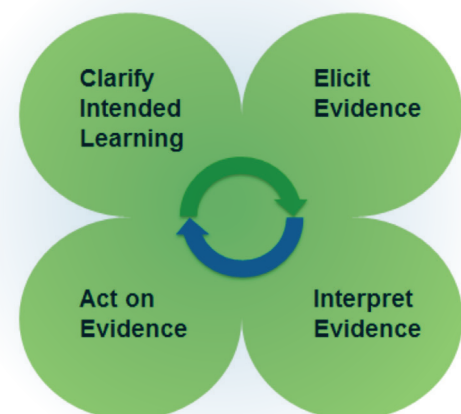

Transform Educational Practice

The **Smarter Balanced Assessment Consortium** is committed to ensuring that all students leave high school prepared for postsecondary success in college or a career. A balanced assessment system helps students and teachers reach this goal.

The **formative assessment process** is key to a balanced assessment system. The Smarter Balanced Digital Library supports educators with the four attributes of formative assessment: **Clarify Intended Learning**, **Elicit Evidence**, **Interpret Evidence**, and **Act on Evidence**. It provides subject- and grade-specific resources that help educators apply the formative assessment process during daily instruction.

Access Peer-Reviewed Content

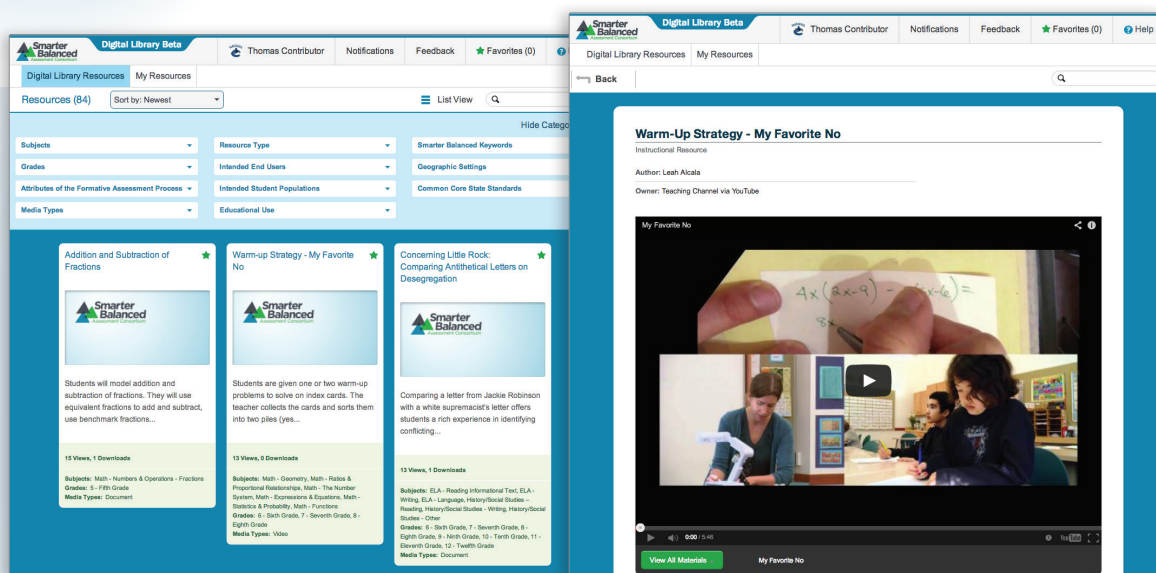

- Over 1500 educators from 22 states with diverse areas of expertise are populating the library in advance of launch.
- Resources in the library have passed multiple blind reviews against a rigorous set of Quality Criteria.

Benefit from Innovative, Comprehensive Modules

In addition to educator-contributed content, the library will contain interactive, multimedia modules built by experts:

- Subject- and grade-specific Exemplar Instructional Modules that model the formative assessment process in the context of the Common Core State Standards.
- Professional Learning Modules on Assessment Literacy designed to help educators deepen their understanding of the formative assessment process in daily instruction.

Collaborate with Others

The Digital Library helps educators find resources using robust search and filtering features, including filters for each CCSS. Educators can then:

- Rate the resources they find.
- Share their firsthand experiences using the resources.
- Add “Start a collaboration topic” and pose questions to their colleagues.
